Profile Summary

Motivated B.Tech IT student at Anna University, BIT Campus, Trichy, with strong analytical, problem-solving, and technical skills and a passion for emerging technologies. Eager to contribute to innovative projects and deliver real-world solutions, while continuously expanding knowledge and expertise in the IT domain.

Experience

GR Soft Tech

Jul, 2025 - Jul, 2025

Artificial Intelligence

- Utilized Python and its libraries (TensorFlow, OpenCV, NumPy) to develop and optimize AI-driven models and algorithms.
- Contributed to the improvement of predictive analytics tools, achieving up to 90% accuracy through effective model design and evaluation.
- Developed a "Three-Level AI Authentication System" integrating AI-based password strength verification and multi-layered security measures using SHA-256 hashing.
- Strengthened expertise in AI implementation, secure data handling, and system development, applying innovative techniques to enhance cybersecurity

Education

University College Of Engineering,BIT campus, Trichy

Nov, 2022 - Present

Graduation B.Tech

Information Technology

Score : 7.83 CGPA

- Focused on developing strong analytical and problem-solving skills.
- Actively participated in workshops, seminars, and technical events on emerging technologies.
- Building a solid foundation in software development, AI, and data-driven systems to apply in real-world projects.

Projects

Three Level AI Password Authentication System

Sep, 2025-Sep, 2025

- Led the development of a sophisticated AI-driven authentication system designed to enhance data security and user experience.
- Created a robust three-tier verification process integrating master password validation, AI-based password strength analysis, and security answer verification.
- Implemented SHA-256 hashing for secure data storage, ensuring protection against unauthorized access.
- Focused on achieving an optimal balance between high-level security and user convenience.

Customer Sentimental Analysis

Apr, 2024-May, 2024

- Developed a comprehensive system to process and interpret customer reviews for sentiment detection and analysis.
- Applied AI-based sentiment classification to categorize reviews as positive, negative, or neutral, enabling data-driven insights.
- Identified key improvement areas in customer feedback handling, contributing to better customer engagement and product optimization.
- Strengthened skills in data preprocessing, text analysis, and natural language processing (NLP) using Python.

CRM Application for Jewel Management- Salesforce

Nov, 2025-Nov, 2025

- Designed and implemented a Salesforce-based CRM system to manage customer information, jewelry inventory, and order processing.
- Automated billing, pricing, and record-keeping processes, improving efficiency and reducing errors.
- Ensured secure and centralized data management, supporting business growth and operational effectiveness.

Birthday BOT - Robotic Process Automation

Mar, 2024-Apr, 2024

- Developed an RPA solution to automatically generate personalized birthday emails for employees in a company.
- Enhanced employee engagement by recognizing and appreciating individuals, encouraging overall skills and motivation.
- Built using UiPath, demonstrating practical application of automation in HR processes.
